1.0 Introduction

Wagon Trail Energy Center, LLC c/o NextEra Energy Resources, LLC (Applicant) proposes to construct and operate the Wagon Trail Solar Project (Facility), a solar energy generation facility and related or supporting facilities in Morrow County, Oregon. This Exhibit J was prepared to meet the submittal requirements in Oregon Administrative Rule (OAR) 345-021-0010(1)(j).

2.0 Analysis Area

The analysis area for wetland and other jurisdictional waters is defined in the Project Order as "the area within the site boundary" (Figure J-1; ODOE 2021). The site boundary is defined in detail in Exhibits B and C, which includes the information required by OAR 345-021-0010(1)(b) and (c).

3.0 Wetlands and Other Jurisdictional Waters

> *OAR 345-021-0010(1)(j) Information based on literature and field study, as appropriate, about waters of this state, as defined under ORS 196.800, including:*
>
> > *(A) A description of all areas within the site boundary that might be waters of this state and a map showing the location of these features.*

OAR 345-021-0010(1)(j)(A) requests that the Applicant provide a description of all areas within the site boundary that might be waters of this state and a map showing the location of these features. A wetland delineation report describing the conditions and features documented on site is presented in Attachment J-1, the Wagon Trail Solar Project Wetland and Waters Report.

There were no potentially jurisdictional Waters of the State determined to be present within the site boundary.

3.1 Definitions

Oregon Revised Statutes (ORS) 196.800(15) defines Waters of the State as:

> *…all natural waterways, tidal and non-tidal bays, intermittent streams, constantly flowing streams, lakes, wetlands, that portion of the Pacific Ocean that is in the boundaries of this state, all other navigable and non-navigable bodies of water in this state and those portions of the ocean shore, as defined in ORS 390.605, where removal or fill activities are regulated under a state-assumed permit program as provided in 33 United States Code 1344(g) of the Federal Water Pollution Control Act, as amended.*

In OAR 141-085-0510 (105), the Oregon Department of State Lands (ODSL) defines wetlands as "[t]hose areas that are inundated or saturated by surface or groundwater at a frequency and

duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions."

3.2 Jurisdictional Versus Non-Jurisdictional Waters

Not all wetlands and streams are within the jurisdiction of state regulation. For the Facility, several jurisdictional distinctions are important, to estimate impacts only to jurisdictional wetlands and other waters. These include determinations related to the following:

- Ephemeral streams, which generally are not under state jurisdiction, as distinct from perennial and intermittent streams (ODSL 2019); and
- Artificially created roadside and farm ditches, which are considered Waters of the State only if they contain food or game fish and are connected to Waters of the State (OAR 141-085-0515(8)).

Ephemeral streams are defined in the Oregon Streamflow Duration Assessment Method (Nadeau 2015) as streams that flow:

> *…only in direct response to precipitation. Water typically flows only during and shortly after large precipitation events. An ephemeral stream may or may not have a well-defined channel, the stream bed is always above the water table, and stormwater runoff is the primary source of water. An ephemeral stream typically lacks biological, hydrological, and physical characteristics commonly associated with the continuous or intermittent conveyance of water).*

In contrast, intermittent streams are defined by Oregon as "any stream which flows during a portion of every year and which provides spawning, rearing or food-producing areas for food and game fish" (OAR 141-085-0510(49)). Food-producing streams are typically one stream order above a fish-bearing stream.

Wetlands are defined by the State of Oregon as "those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions" (OAR 141-085-0510(110)).

This exhibit presents the Applicant's best professional judgment as to which wetland and other water features are jurisdictional under ODSL regulation. While Exhibit J uses the term "jurisdictional waters," the Applicant recognizes that final determination of agency jurisdiction will be made by ODSL, based on the information presented by the Applicant.

3.3 Delineation of Wetlands and Other Water Features

3.3.1 Methods

The Applicant conducted a desktop study of potentially jurisdictional wetlands and other waters to assist in planning for field delineations conducted in July 2020. Site-specific literature and Geographic Information System map layers reviewed as part of the desktop study included:

- National Wetland Inventory (NWI) maps (USFWS 2020);
- Hydric Soils List for Morrow County, Oregon (NRCS 2020a);
- The Natural Resources Conservation Service (NRCS) Soil Surveys of Morrow County in Oregon (NRCS 2020b);
- United States Geological Survey National Hydrography Dataset (NHD) (USGS 2020), which provided the location of potential streams; and
- Google Earth (2020), Morrow County, Oregon.

Field investigations for the delineation of wetlands and other waters were conducted in 2020 and 2021, and included pedestrian surveys within the site boundary. Delineations were conducted utilizing techniques published in the 1987 United States Army Corps of Engineers (USACE) Wetlands Delineation Manual (USACE 1987), the Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region (USACE 2008), and OARs for wetland delineations (141-090-0005 through 141-090-0055; ODSL 2001).

During the delineation efforts, each waterbody encountered was examined for wetland characteristics consistent with Waters of the State definitions (see Section 3.2), and this evidence was documented using standard field data sheets. The location and extent of each waterbody (regardless of its characteristics) was mapped with Global Positioning System technology. Upland plots were also established at some survey locations with mapped NWI features to confirm that the site did not meet wetland criteria. Streams were characterized as ephemeral using the Oregon Streamflow Duration Assessment Method (Nadeau 2015).

Detailed descriptions of delineation methods for wetlands and other waters are provided in the Wetland and Waters Report (Attachment J-1). The report was submitted to ODSL on January 13, 2022 for written concurrence (ODSL file number 2022-0023).

3.3.2 Results

Based on the results of site investigations conducted, no wetlands and five ephemeral streams were delineated within the site boundary. Appendix A in Attachment J-1 provides additional detail about each of the ephemeral streams. Ephemeral streams that were delineated in the analysis area are presumed not to be state jurisdictional as the state does not regulate ephemeral drainages.

Wetland presence was determined as per methods in the USACE Wetland Delineation Manual and the Arid West Supplement. No wetland indicators were found at any of the low elevation sites on the landscape or within the ephemeral streambeds.

4.0 Effects on Wetlands and Other Jurisdictional Waters of the State

OAR 345-021-0010(1)(j)(B) An analysis of whether construction or operation of the proposed facility would adversely affect any waters of this state.

OAR 345-021-0010(1)(j)(C) A description of the significance of potential adverse impacts to each feature identified in (A), including the nature and amount of material the applicant would remove from or place in the waters analyzed in (B).

OAR 345-021-0010(1)(j)(B) requests an analysis of any adverse effects on Waters of the State from the Facility. The Facility will not adversely affect Waters of the State, as defined under OAR 141-085-0510. There are no Waters of the State within the site boundary. The drainages that do exist are ephemeral and are documented in the attached Wetland and Waters Report (Attachment J-1). The Wetland and Waters Report was submitted to ODSL for concurrence on January 13, 2022 (ODSL file number 2022-0023).

5.0 Information Supporting Lack of Requirement for Removal-Fill Permit

OAR 345-021-0010(1)(j)(D) If the proposed facility would not need a removal-fill authorization, an explanation of why no such authorization is required for the construction and operation of the proposed facility.

Based on the results of the October 2021 wetland delineation (Attachment J-1), the Facility will have no adverse impacts to wetlands or other jurisdictional Waters of the State because none are present within the site boundary. Therefore, the removal-fill authorization is not required.

6.0 Mitigation and Monitoring Program

OAR 345-021-0010(1)(j)(F) A description of proposed actions to mitigate adverse impacts to the features identified in (A) and the applicant's proposed monitoring program, if any, for such impacts.

The Facility will have no adverse impacts to wetlands or other jurisdictional Waters of the State. Therefore, no monitoring or mitigation is proposed.

7.0 Submittal Requirements

7.1 Submittal Requirements

Table J-1. Submittal Requirements Matrix

Requirement	Location
OAR 345-021-0010(1)(j) Information based on literature and field study, as appropriate, about waters of this state, as defined under ORS 196.800 including:	–
(A) A description of all areas within the site boundary that might be waters of this state and a map showing the location of these features.	Section 3.0, Figure J-1, and Attachment J-1
(B) An analysis of whether construction or operation of the proposed facility would adversely affect any waters of this state.	Section 4.0
(C) A description of the significance of potential adverse impacts to each feature identified in (A), including the nature and amount of material the applicant would remove from or place in the waters analyzed in (B).	Section 4.0
(D) If the proposed facility would not need a removal-fill authorization, an explanation of why no such authorization is required for the construction and operation of the proposed facility.	Section 5.0
(E) If the proposed facility would need a removal-fill authorization, information to support a determination by the Council that the Oregon Department of State Lands should issue a removal-fill permit, including information in the form required by the Department of State Lands under OAR chapter 141 Division 85.	N/A
(F) A description of proposed actions to mitigate adverse impacts to the features identified in (A) and the applicant's proposed monitoring program, if any, for such impacts.	N/A

7.2 Approval Standard

OAR 345 Division 22 does not provide an approval standard specific to Exhibit J.

1.0 Introduction

Wheatridge East Wind, LLC c/o NextEra Energy Resources, LLC (Applicant) is proposing to construct and operate the Wagon Trail Solar Project (Facility), a photovoltaic solar energy generation facility and supporting facilities in Morrow County, Oregon (Figure 1). Wetland and other waters surveys were completed on July 27 to 30, 2020 with additional photos taken on August 6, 2020 and additional surveys completed on March 8, 2021, April 14, 2021, and September 13, 2021 in preparation for the permitting of this Facility.

2.0 Landscape Setting and Land Use

2.1 Study Area

The Facility study area encompasses approximately 6,269 acres of privately owned land. Figure 2 shows and Table 1 below lists the tax lots crossed by the study area.

Table 1. Tax Lots Mapped in the Facility Study Area

02N25E	ROADS

2.2 Landscape Setting

The Facility is located within the Level III Columbia Plateau Ecoregion, and within the further subdivided Level IV Umatilla Plateau (Thorson et al. 2003). In addition, the Facility is within U.S. Department of Agriculture Land Resource Region B, Northwest Wheat and Range Region (NRCS 2006).

This ecoregion is characterized by a nearly flat to rolling, treeless plateau, underlain by basalt with layers of loess deposits. Glacial features such as patterned ground are common. Thicker loess deposits are farmed for grain and chemically fallowed every other season. Rangeland dominates areas of thin loess deposits and other soils. The climate within this ecoregion is arid due to the rain-shadow effect of the Cascade Mountains. Most of this ecoregion receives less than 15 inches of precipitation a year, with some areas receiving as little as 8 inches (OSU 2010). The low annual precipitation supports semi-arid grassland and sagebrush steppe. Non-native cheatgrass (*Bromus tectorum*) inhabits vast areas of this ecoregion (Franklin and Dyrness 1988).

2.3 Land Use

The study area generally encompasses rural lands. Towns within proximity to the Facility include the cities of Lexington, Ione, and Heppner in Morrow County. Much of the historic native grassland and shrub-steppe habitat within the study area has been converted for agricultural use since European settlement in the mid-1800s.

The study area is almost entirely in a dryland winter wheat/chemical fallow rotation due to the low annual precipitation rate and lack of irrigation water in this region. The remaining land in the study area are small areas where the soils are too shallow for cropping. Those areas have a mix of native and invasive vegetation.

2.4 Mapped Features

Prior to field work, Tetra Tech Inc. (Tetra Tech) reviewed the National Wetlands Inventory (NWI; USFWS 2020), the National Hydrography Dataset (NHD; USGS 2020), hydric soils data from the Natural Resources Conservation Service (NRCS; NRCS 2020a), and aerial photographs (Google Earth Pro 2020) to identify potential wetlands and other waters, as described below. Digital maps used in the field contained the NWI, NHD, and recent aerial photograph overlays.

2.4.1 National Wetlands Inventory and Local Wetland Inventory Data

Desktop review of NWI data showed no wetlands in the study area. There is no Local Wetland Inventory available at this location (ODSL 2019). Figure 3 shows the NWI map layered over the Project study area.

2.4.2 Hydric Soils Data

Fifteen soil map units are mapped in the study area (Figure 4). There are no soils with a hydric component within the study area. Table 2 below summarizes the soil types listed by NRCS within the study area.

Table 2. Soils Mapped in the Study Area

Map Unit Code	Map Unit Name	Acres	Percent of Study Area	Percent Hydric Soil
13D	Gravden very gravelly loam, 5 to 20 percent slopes	0.3	<1%	0%
13E	Gravden very gravelly loam, 20 to 40 percent slopes	90.7	1%	0%
22	Kimberly silt loam, 0 to 3 percent slopes	98.6	2%	0%
28E	Lickskillet very stony loam, 7 to 40 percent slopes	69.5	1%	0%
29F	Lickskillet-Rock outcrop complex, 40 to 70 percent slopes	0.3	<1%	0%
45B	Ritzville silt loam, 2 to 7 percent slopes	2735.1	44%	0%
45C	Ritzville silt loam, 7 to 12 percent slopes	158.0	3%	0%
47E	Ritzville silt loam, 20 to 40 percent south slopes	0.4	<1%	0%
70B	Warden very fine sandy loam, 2 to 5 percent slopes	53.5	1%	0%
71A	Warden silt loam, 0 to 2 percent slopes	501.6	8%	0%
71B	Warden silt loam, 2 to 5 percent slopes	691.1	11%	0%
71C	Warden silt loam, 5 to 12 percent slopes	19.8	<1%	0%
71D	Warden silt loam, 12 to 20 percent slopes	10.6	<1%	0%
75B	Willis silt loam, 2 to 5 percent slopes	996.3	16%	0%
75C	Willis silt loam, 5 to 12 percent slopes	635.0	10%	0%
75D	Willis silt loam, 12 to 20 percent slopes	4.8	<1%	0%
78	Xeric Torriorthents, nearly level	203.1	3%	0%

2.4.3 National Hydrography Dataset

The NHD shows no perennial streams within the study area (USGS 2020). There are intermittent stream lines present on the NHD maps within the study area, and those were used to determine field survey locations.

3.0 Site Alterations

Site alterations are those activities that directly or indirectly impact wetlands and other waters such that the function or area of the feature changes significantly. A significant alteration would be one that renders the feature non-functioning, or one that changes the boundaries. Land use in the study area is generally dominated by wheat farming. Tillage practices are changing across the

region, and the conversion to reduced till and no-till methods of farming have decreased the amount of overland flow and increased the infiltration rates on-site. The alterations associated with these practices may have affected the geographic size and/or the hydroperiod of wetlands and other waters. Some waters that were delineated in the study area are likely to have had historically higher flows due to runoff from the farmed fields that would not be present with the new farming practices.

4.0 Precipitation Data and Analysis

Average historical monthly precipitation data and daily precipitation data for the periods preceding and during field work were obtained from the National Oceanic and Atmospheric Administration's National Weather Service (NOAA n.d.; Tables 3 and 4). The closest geographical location with an NRCS Climate Analysis for Wetlands Table (WETS) is Heppner, Oregon, 36 miles to the east and approximately 500 feet higher in elevation than the study area (NRCS 2020b).

4.1 2020 Field Surveys

Total accumulated precipitation for the water year between October 2019 and July 2020 was 47 percent of average due to below-average precipitation in every month except May. For the 10-day span preceding and during field work from July 27–29, 2020, no precipitation was measured (NOAA n.d.). Based on the precipitation data for the 3 months prior to the site visits and the overall below average precipitation for the water year, it was estimated that groundwater was below what is usually encountered at this time of year (Table 3).

4.2 2021 Field Surveys

Total accumulated precipitation for the water year between October 2020 and September 2021 was 65 percent of average due to below-average precipitation in every month except November, February, and September. For the 10-day span preceding field work on March 8, 2021, 0.70 inch of precipitation was measured, and it rained while the field surveys were being conducted (0.10 inch total) (NOAA n.d.). For the 10-day span preceding field work on April 14, 2021, 0.20 inch of rain fell. For the 10-day span preceding field work on September 13, 2021, 0.44 inch of rain fell, almost all of that the day before surveys were completed.

Based on the precipitation data for the 3 months prior to the site visits and the overall below average precipitation for the water year, it was estimated that groundwater was below what is usually encountered at this time of year (Table 4).

Lower than normal precipitation levels did not affect the delineation of waters as determinations of intermittent versus ephemeral stream were made using indicators described in the Streamflow Duration Assessment Method (SDAM) for the Pacific Northwest (Nadeau 2015).

Table 3. Precipitation Data – Water Year 2019-2020 and Historical (Inches)

Precipitation	Oct 2019	Nov 2019	Dec 2019	Jan 2020	Feb 2020	Mar 2020	Apr 2020	May 2020	Jun 2020	July 2020	Annual Total to Date

5.0 Methods

5.1 Pre-field Work

In preparation for field work, Tetra Tech reviewed NWI, NHD, hydric soils data, and aerial photographs to identify potential wetlands and other waters (Section 2.4). Tetra Tech prepared digital field maps with these data and uploaded the maps onto data collection tablets to assist field staff in identifying the locations of probable wetlands and non-wetland waters within the study area, or adjacent features that may extend into the study area.

Wetlands and surface water data were obtained from the NWI (USFWS 2020) and the NHD (USGS 2020). Soils data were obtained from the NRCS Web Soil Survey (NRCS 2020b). Tetra Tech used the historical orthoimagery available on Google Earth Pro to look for aerial signatures of wetlands and waters (Google Earth Pro 2020).

The following guidance documents and procedures were reviewed:

- Arid West Supplement (USACE 2008);
- Wetlands Delineation Manual, Technical Report Y-87-1 (Manual; USACE 1987);
- SDAM (Nadeau 2015);
- Classification of Wetlands and Deepwater Habitats of the United States (Cowardin et al. 1979);
- Oregon Administrative Rule (OAR) 141-090, Administrative Rules for Wetland Delineation Report Requirements and for Jurisdictional Determinations for the Purpose of Regulating Fill and Removal within Waters of the State;
- A Field Guide to the Identification of the Ordinary High Water Mark in the Arid West Region of the Western United States (Lichvar and McColley 2008); and
- Streamflow Duration Assessment Method for the Pacific Northwest (Nadeau 2015).

5.2 Field Work

Field investigations for the delineation of wetlands and other waters included pedestrian surveys within the study area. Tetra Tech conducted the field survey and delineation of non-wetland waters on July 27-29, 2020, as well as March 8, April 14, and September 13, 2021. The desktop surface water data were used to focus the non-wetland waters evaluation as necessary. Section 7.0 discusses deviations from the NWI and NHD data.

5.2.1 Wetland Delineations

Wetland presence was determined per methods in the Manual and the Arid West Supplement. No wetland indicators were found at any of the low elevation sites on the landscape nor were they found

within the ephemeral streambeds. Sample sites were taken in three places where there was the most likelihood of finding hydric conditions; data sheets describing those sites are in Appendix A.

5.2.2 Non-wetland Waters Evaluations

Evaluations of non-wetland waters consisted of the following:

- Flow duration for non-wetland waters was determined using SDAM (Nadeau 2015). Details on mapping methods are presented in Section 8.0, and the SDAM sheets are in Appendix A.
- Ordinary High Water Mark was determined based on criteria such as changes in the character of the soil, sediment, litter or debris deposition, changes in vegetation, and scour lines.
- The centerline of non-wetland waters less than 6 feet in width was recorded as a line feature and buffered to the stream width determined in the field.
- Photographs were taken to document streams, ditches, and upland conditions at locations that NHD mapped as streams (Appendix B).

6.0 Description of Wetlands and Other Non-wetland Waters

All features evaluated in the study area are depicted on the Figure 5 map set.

6.1 Wetlands

There are no wetlands within the study area.

6.2 Non-wetland Waters

Five ephemeral streams were delineated within the study area as shown in Table 5.

Table 5. Delineated Non-Wetland Waters

Feature Name	Map Number	OHWL Width (feet)	Flow Duration	Flow Direction	Photo Number
EPH-01	5	4 Feet	Ephemeral	Northeast	30, 31, 49
EPH-02	6	2 Feet	Ephemeral	North	44, 93
EPH-02a	7	3 Feet	Ephemeral	North	82, 83
EPH-02b	6	1 Foot	Ephemeral	Northwest	86, 87,88
EPH-03	7	3 Feet	Ephemeral	South	57, 59, 60, 61
EPH-04	4, 6	6 Feet	Ephemeral	North	75 - 81
EPH-05	6	1 Foot	Ephemeral	North	96

7.0 Deviation from NWI and NHD

The NWI showed no wetlands in the study area. Field surveys confirmed this finding. The field-determined flow duration for three NWI-mapped intermittent streams were determined to be ephemeral, and one NWI-mapped intermittent stream was determined to not have physical characteristics indicative of an intermittent stream (Table 6). NHD mapped streams that were field determined to be not present are listed in Table 6.

Table 6. Deviations from National Wetlands Inventory

Feature Name	Map Number	Photograph Number	NHD Classification	NWI Classification	Reason for Deviation
XBB-01	1	15	Intermittent Stream	None	No bed or banks in active cropland.
XBB-02	1	16	None	None	Orthoimagery showed potential drainage, no bed or banks in active cropland.
XBB-03	1	17	Intermittent Stream	None	No bed or banks in active cropland.
XBB-04	1	19	Intermittent Stream	None	No bed or banks in active cropland.
XBB-05	1	20	Intermittent Stream	None	No bed or banks in area with shallow soils between crop fields.
XBB-06	1	21	Intermittent Stream	None	No bed or banks in area with shallow soils between crop fields.
XBB-07	1	22	Intermittent Stream	None	No bed or banks in area with shallow soils between crop fields.
XBB-08	1	23	Intermittent Stream	None	No bed or banks in area with shallow soils between crop fields.
XBB-09	3	24	Intermittent Stream	None	No bed or banks in active cropland.
XBB-10	3	25	Intermittent Stream	None	No bed or banks in active cropland.
XBB-11	2	12	Intermittent Stream	None	No bed or banks in active cropland.
XBB-12	2	13	Intermittent Stream	None	No bed or banks in active cropland.
XBB-13	2	14	Intermittent Stream	None	No bed or banks in active cropland.
XBB-14	2, 3	26	Intermittent Stream	None	No bed or banks in active cropland.
XBB-15	2, 3	27	Intermittent Stream	None	No bed or banks in active cropland.
XBB-16	2	28	Intermittent Stream	None	No bed or banks in active cropland.
XBB-17	5	47	Intermittent Stream	None	No bed or banks in active cropland.
XBB-18	5	48	Intermittent Stream	None	No bed or banks in active cropland.
XBB-19	5	29	Intermittent Stream	None	No bed or banks in active cropland.
XBB-20	5	31	Intermittent Stream	None	EPH-01 no longer has bed or banks at this point. Active cropland to road edge.
XBB-21	5	32	Intermittent Stream	None	No bed or banks on opposite side of road and downstream from EPH-01.

Feature Name	Map Number	Photograph Number	NHD Classification	NWI Classification	Reason for Deviation
XBB-22	5	50	Intermittent Stream	None	No bed or banks on opposite side of road and downstream from EPH-01.
XBB-23	5	34	Intermittent Stream	Riverine	No bed or banks in sagebrush filled low point in rangeland (cattle present).
XBB-24	5	51	Intermittent Stream	Riverine	No bed or banks in sagebrush filled low point in rangeland (cattle present).
XBB-25	5	52	Intermittent Stream	None	No bed or banks in active rangeland.
XBB-26	5	53	Intermittent Stream	None	No bed or banks in active rangeland.
XBB-27	7	55	Intermittent Stream	None	No bed or banks in active cropland.
XBB-28	5	37	Intermittent Stream	None	No bed or banks in active cropland.
XBB-29	7	38	Intermittent Stream	None	No bed or banks in active cropland.
XBB-30	7	39	Intermittent Stream	None	No bed or banks in active cropland.
XBB-31	7	40	Intermittent Stream	None	No bed or banks in active cropland.
XBB-32	5	41	Intermittent Stream	None	No bed or banks in active cropland.
XBB-33	6	45	Intermittent Stream	None	No bed or banks in active cropland.
XBB-34	6	46	Intermittent Stream	None	No bed or banks in shallow soils adjacent to cropland.
XBB-35	5	36	Intermittent Stream	Riverine	No bed or banks in sagebrush filled low point in rangeland (cattle present).
XBB-36	7	56	Intermittent Stream	None	No bed or banks in active cropland.
XBB-37	7	57	Intermittent Stream	None	EPH-03 does not have bed or banks uphill of this point.
XBB-38	7	58	Intermittent Stream	None	No bed or banks in active cropland.
XBB-39	7	62	Intermittent Stream	Riverine	No bed or banks in active cropland.
XBB-40	6	63	Intermittent Stream	None	No bed or banks in active cropland.
XBB-41	6	43	Intermittent Stream	None	No bed or banks in active cropland.
XBB-42	6	65	Intermittent Stream	None	No bed or banks in active cropland.
XBB-43	6	66	Intermittent Stream	None	No bed or banks in active cropland.
XBB-44	6	68	Intermittent Stream	None	No bed or banks in active cropland.
XBB-45	4	70	Intermittent Stream	None	No bed or banks in area with shallow soils between crop fields.
XBB-46	4	69	Intermittent Stream	None	No bed or banks in area with shallow soils between crop fields.
XBB-47	4	71	Intermittent Stream	None	No bed or banks in area with shallow soils between crop fields.
XBB-48	4	72	Intermittent Stream	None	No bed or banks in active cropland.
XBB-49	7	84	Intermittent Stream	None	No bed or banks in active cropland.

Feature Name	Map Number	Photograph Number	NHD Classification	NWI Classification	Reason for Deviation
XBB-50	6	85	Intermittent Stream	None	No bed or banks in active cropland.
XBB-51	6	95	Intermittent Stream	None	No bed or banks.
XBB-52	6	97	Intermittent Stream	None	No bed or banks.

8.0 Mapping Methods

Water centerlines and photograph locations were recorded using a Juniper Geode series Global Positioning System (GPS) unit, configured to differentially correct positions in real-time using the Satellite Based Augmentation System, which typically results in positional error of less than 1 meter (Juniper Systems 2018). Water centerlines were recorded as line features using GPS units set to collect vertices every 2 seconds. Field staff walked the centerline of the ephemeral streams with the GPS unit in hand, at a pace consistent with creating an accurate representation of the water feature.

9.0 Results and Conclusions

Using methods recommended in the Manual and Arid West Supplement, no wetlands were found in the study area (Table 7). Five ephemeral streams were delineated.

Table 7. Summary of Wetlands, Other Water Features, and Roadside Drainage Ditches

Feature	Number of Features	Acres
Wetlands	0	N/A
Ephemeral Stream	5	5.462

Appendix A. Datasheets

This page intentionally left blank

U.S. Army Corps of Engineers
WETLAND DETERMINATION DATA SHEET – Arid West Region
See ERDC/EL TR-07-24; the proponent agency is CECW-CO-R

OMB Control #: 0710-xxxx, Exp: Pending
Requirement Control Symbol EXEMPT:
(Authority: AR 335-15, paragraph 5-2a)

Project/Site: Wagon Trail City/County: Umatilla Sampling Date: 7/28/20

Applicant/Owner: NextEra State: OR Sampling Point: SS-01

Investigator(s): Jess Taylor/Sara Frank Section, Township, Range: Section 27, T01N, R25E

Landform (hillside, terrace, etc.): Drainage Local relief (concave, convex, none): concave Slope (%): 5

Subregion (LRR): LRR B Lat: 45.538689 Long: -119.677413 Datum: NAD83

Soil Map Unit Name: 75C Willis Silt Loam, 5 to 12 percent slopes NWI classification: R4SBC

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No ____ (If no, explain in Remarks.)

Are Vegetation X , Soil ____ , or Hydrology ____ significantly disturbed? Are "Normal Circumstances" present? Yes X No ____

Are Vegetation ____ , Soil ____ , or Hydrology ____ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes ____	No X	**Is the Sampled Area within a Wetland?** **Yes** ____ **No** X
Hydric Soil Present?	Yes ____	No X	
Wetland Hydrology Present?	Yes X	No ____	

Remarks:
NWI shows riverine wetland in drainage. Drainage is ephemeral with shallow soils. No vegetation was present in drainage and adjacent cropfields had recently been harvested (winter wheat).

VEGETATION – Use scientific names of plants.

Tree Stratum (Plot size: ____)	Absolute % Cover	Dominant Species?	Indicator Status

2.			
	____ =Total Cover		

% Bare Ground in Herb Stratum 100 % Cover of Biotic Crust ____

Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: ____ (A)

Total Number of Dominant Species Across All Strata: ____ (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: ____ (A/B)

Prevalence Index worksheet:

Total % Cover of:	Multiply by:
OBL species ____	x 1 = ____
FACW species ____	x 2 = ____
FAC species ____	x 3 = ____
FACU species ____	x 4 = ____
UPL species ____	x 5 = ____
Column Totals: ____ (A)	____ (B)

Prevalence Index = B/A = ____

Hydrophytic Vegetation Indicators:

___ Dominance Test is >50%

___ Prevalence Index is ≤3.0[1]

___ Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Hydrophytic Vegetation Present? **Yes** ____ **No** X

Remarks:

SOIL

Sampling Point: SS-01

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-2	10YR 3/2	100					Silt Loam	
2-4	10YR 3/3	100					Silt Loam	

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- ___ Histosol (A1)
- ___ Histic Epipedon (A2)
- ___ Black Histic (A3)
- ___ Hydrogen Sulfide (A4)
- ___ Stratified Layers (A5) **(LRR C)**
- ___ 1 cm Muck (A9) **(LRR D)**
- ___ Depleted Below Dark Surface (A11)
- ___ Thick Dark Surface (A12)
- ___ Sandy Mucky Mineral (S1)
- ___ Sandy Gleyed Matrix (S4)
- ___ Sandy Redox (S5)
- ___ Stripped Matrix (S6)
- ___ Loamy Mucky Mineral (F1)
- ___ Loamy Gleyed Matrix (F2)
- ___ Depleted Matrix (F3)
- ___ Redox Dark Surface (F6)
- ___ Depleted Dark Surface (F7)
- ___ Redox Depressions (F8)

Indicators for Problematic Hydric Soils[3]:

- ___ 1 cm Muck (A9) **(LRR C)**
- ___ 2 cm Muck (A10) **(LRR B)**
- ___ Iron-Manganese Masses (F12) **(LRR D)**
- ___ Reduced Vertic (F18)
- ___ Red Parent Material (F21)
- ___ Very Shallow Dark Surface (F22)
- ___ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: Bedrock

Depth (inches): 4

Hydric Soil Present? **Yes** ___ **No** X

Remarks:

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ___ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1) **(Nonriverine)**
- ___ Sediment Deposits (B2) **(Nonriverine)**
- ___ Drift Deposits (B3) **(Nonriverine)**
- X Surface Soil Cracks (B6)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Water-Stained Leaves (B9)
- ___ Salt Crust (B11)
- ___ Biotic Crust (B12)
- ___ Aquatic Invertebrates (B13)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Water Marks (B1) **(Riverine)**
- ___ Sediment Deposits (B2) **(Riverine)**
- ___ Drift Deposits (B3) **(Riverine)**
- ___ Drainage Patterns (B10)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Shallow Aquitard (D3)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes ___	No X	Depth (inches): ___
Water Table Present?	Yes ___	No X	Depth (inches): ___
Saturation Present? (includes capillary fringe)	Yes ___	No X	Depth (inches): ___

Wetland Hydrology Present? **Yes** X **No** ___

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Project/Site: Wagon Trail | City/County: Umatilla | Sampling Date: 7/28/20
Applicant/Owner: NextEra | State: OR | Sampling Point: SS-02
Investigator(s): Jess Taylor/Sara Frank | Section, Township, Range: Section 27, T01N, R25E
Landform (hillside, terrace, etc.): Drainage | Local relief (concave, convex, none): concave | Slope (%): 1
Subregion (LRR): LRR B | Lat: 45.544614 | Long: -119.672187 | Datum: NAD83
Soil Map Unit Name: 78 Xeric Torriorthents, nearly level | NWI classification: R4SBC
Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No ___ (If no, explain in Remarks.)
Are Vegetation ___, Soil ___, or Hydrology ___ significantly disturbed? Are "Normal Circumstances" present? Yes X No ___
Are Vegetation ___, Soil ___, or Hydrology ___ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes ___ No X
Hydric Soil Present? Yes ___ No X
Wetland Hydrology Present? Yes ___ No X

Is the Sampled Area within a Wetland? **Yes** ___ **No** X

Remarks:
NWI shows a riverine wetland within a drainage. Drainage is not present, no hydric properties were found at site.

VEGETATION – Use scientific names of plants.

FAC species	0	x 3 =	0
FACU species	10	x 4 =	40
UPL species	100	x 5 =	500
Column Totals:	110 (A)		540 (B)

Prevalence Index = B/A = 4.91

Hydrophytic Vegetation Indicators:
___ Dominance Test is >50%
___ Prevalence Index is ≤3.0[1]
___ Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)
___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Hydrophytic Vegetation Present? **Yes** ___ **No** X

Remarks:

SOIL

Sampling Point: SS-02

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	Matrix %	Redox Features Color (moist)	Redox Features %	Type[1]	Loc[2]	Texture	Remarks
0-16	10YR 3/3	100					Silt Loam	

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- ___ Histosol (A1)
- ___ Histic Epipedon (A2)
- ___ Black Histic (A3)
- ___ Hydrogen Sulfide (A4)
- ___ Stratified Layers (A5) **(LRR C)**
- ___ 1 cm Muck (A9) **(LRR D)**
- ___ Depleted Below Dark Surface (A11)
- ___ Thick Dark Surface (A12)
- ___ Sandy Mucky Mineral (S1)
- ___ Sandy Gleyed Matrix (S4)
- ___ Sandy Redox (S5)
- ___ Stripped Matrix (S6)
- ___ Loamy Mucky Mineral (F1)
- ___ Loamy Gleyed Matrix (F2)
- ___ Depleted Matrix (F3)
- ___ Redox Dark Surface (F6)
- ___ Depleted Dark Surface (F7)
- ___ Redox Depressions (F8)

Indicators for Problematic Hydric Soils[3]:

- ___ 1 cm Muck (A9) **(LRR C)**
- ___ 2 cm Muck (A10) **(LRR B)**
- ___ Iron-Manganese Masses (F12) **(LRR D)**
- ___ Reduced Vertic (F18)
- ___ Red Parent Material (F21)
- ___ Very Shallow Dark Surface (F22)
- ___ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: _____

Depth (inches): _____

Hydric Soil Present? **Yes** ___ **No** X

Remarks:

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ___ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1) **(Nonriverine)**
- ___ Sediment Deposits (B2) **(Nonriverine)**
- ___ Drift Deposits (B3) **(Nonriverine)**
- ___ Surface Soil Cracks (B6)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Water-Stained Leaves (B9)
- ___ Salt Crust (B11)
- ___ Biotic Crust (B12)
- ___ Aquatic Invertebrates (B13)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Water Marks (B1) **(Riverine)**
- ___ Sediment Deposits (B2) **(Riverine)**
- ___ Drift Deposits (B3) **(Riverine)**
- ___ Drainage Patterns (B10)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Shallow Aquitard (D3)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes ___ No X Depth (inches): ___

Water Table Present? Yes ___ No X Depth (inches): ___

Saturation Present? Yes ___ No X Depth (inches): ___

(includes capillary fringe)

Wetland Hydrology Present? **Yes** ___ **No** X

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

U.S. Army Corps of Engineers
WETLAND DETERMINATION DATA SHEET – Arid West Region
See ERDC/EL TR-07-24; the proponent agency is CECW-CO-R

OMB Control #: 0710-xxxx, Exp: Pending

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Appendix B: Streamflow Duration Field Assessment Form

Project # / Name Wagon Trail		Assessor Jessica Taylor	
Address Rural Morrow County		Date 7/28/20	
Waterway Name N/A		Coordinates at downstream end (ddd.mm.ss)	Lat. N
Reach Boundaries			Long. W
Precipitation w/in 48 hours (cm) 0	Channel Width (m) 1.3	☑ Disturbed Site / Difficult Situation (Describe in "Notes")	

Observed Hydrology

% of reach w/observed surface flow 0

% of reach w/any flow (surface or hyporheic) 0

# of pools observed 0

Observations

Observed Wetland Plants (and indicator status):

No wetland plants were observed

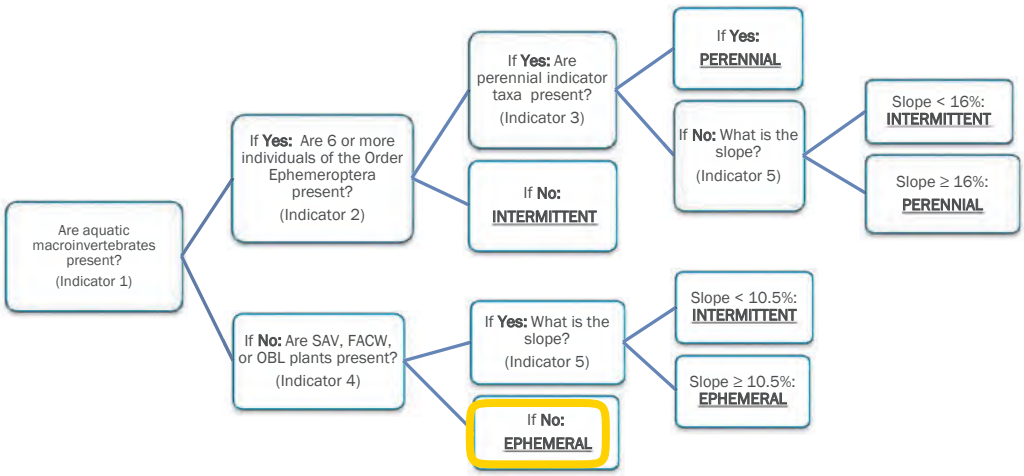
Observed Macroinvertebrates:

Taxon	Indicator Status	Ephemer-optera?	# of Individuals

Indicators

1. Are aquatic macroinvertebrates present?	☐ Yes	☑ No
2. Are 6 or more individuals of the Order Ephemeroptera present?	☐ Yes	☑ No
3. Are perennial indicator taxa present? (refer to Table 1)	☐ Yes	☑ No
4. Are FACW, OBL, or SAV plants present? (Within ½ channel width)	☐ Yes	☑ No
5. What is the slope? (In percent, measured for the valley, not the stream)	5 %	

Conclusions



Single Indicators:

☐ Fish

☐ Amphibians

Finding:

☑ Ephemeral

☐ Intermittent

☐ Perennial

Notes: (explanation of any single indicator conclusions, description of disturbances or modifications that may interfere with indicators, etc.)

Difficult Situation:

Describe situation. For disturbed streams, note extent, type, and history of disturbance.

Land is actively being used for cropping wheat

☐ Prolonged Abnormal Rainfall / Snowpack

☐ Below Average

☐ Above Average

☑ Natural or Anthropogenic Disturbance

☐ Other: _____

Additional Notes: (sketch of site, description of photos, comments on hydrological observations, etc.) Attach additional sheets as necessary.

Ancillary Information:

☐ Riparian Corridor

☐ Erosion and Deposition

☐ Floodplain Connectivity

Observed Amphibians, Snake, and Fish:

Taxa	Life History Stage	Location Observed	Number of Individuals Observed

Appendix B: Streamflow Duration Field Assessment Form

Photo 97. EPH-05 ends here, terrain changes to uphill and bed and banks disappear. Looking NW. 9/13/2021.

REQUEST FOR CORPS JURISDICTIONAL DETERMINATION (JD)

To: Portland District, U.S. Army Corps of Engineers

- I am requesting a JD on property located at: 8 miles NE of Lexington, Oregon (Street Address)
  City/Township/Parish: _____ County: Morrow State: Oregon
  Acreage of Parcel/Review Area for JD: 6,269 acres
  Section: _____ Township: 01 N Range: 25 E
  Latitude (decimal degrees): 45.563795 Longitude (decimal degrees): -119.651279
  (For linear projects, please include the center point of the proposed alignment.)
- Please attach a survey/plat map and vicinity map identifying location and review area for the JD.
- [ ] I currently own this property. [ ] I plan to purchase this property.
  [✔] I am an agent/consultant acting on behalf of the requestor.
  [ ] Other (please explain): _____
- Reason for request: (check as many as applicable)
  [ ] I intend to construct/develop a project or perform activities on this parcel which would be designed to avoid all aquatic resources.
  [✔] I intend to construct/develop a project or perform activities on this parcel which would be designed to avoid all jurisdictional aquatic resources under Corps authority.
  [✔] I intend to construct/develop a project or perform activities on this parcel which may require authorization from the Corps, and the JD would be used to avoid and minimize impacts to jurisdictional aquatic resources and as an initial step in a future permitting process.
  [ ] I intend to construct/develop a project or perform activities on this parcel which may require authorization from the Corps; this request is accompanied by my permit application and the JD is to be used in the permitting process.
  [ ] I intend to construct/develop a project or perform activities in a navigable water of the U.S. which is included on the district Section 10 list and/or is subject to the ebb and flow of the tide.
  [ ] A Corps JD is required in order to obtain my local/state authorization.
  [ ] I intend to contest jurisdiction over a particular aquatic resource and request the Corps confirm that jurisdiction does/does not exist over the aquatic resource on the parcel.
  [ ] I believe that the site may be comprised entirely of dry land.
  [ ] Other: _____
- Type of determination being requested:
  [✔] I am requesting an approved JD.
  [ ] I am requesting a preliminary JD.
  [ ] I am requesting a "no permit required" letter as I believe my proposed activity is not regulated.
  [ ] I am unclear as to which JD I would like to request and require additional information to inform my decision.

By signing below, you are indicating that you have the authority, or are acting as the duly authorized agent of a person or entity with such authority, to and do hereby grant Corps personnel right of entry to legally access the site if needed to perform the JD. Your signature shall be an affirmation that you possess the requisite property rights to request a JD on the subject property.

*Signature: _____ Date: 02/24/2022

***Authorities**: Rivers and Harbors Act, Section 10, 33 USC 403; Clean Water Act, Section 404, 33 USC 1344; Marine Protection, Research, and Sanctuaries Act, Section 103, 33 USC 1413; Regulatory Program of the U.S. Army Corps of Engineers; Final Rule for 33 CFR Parts 320-332.
Principal Purpose: The information that you provide will be used in evaluating your request to determine whether there are any aquatic resources within the project area subject to federal jurisdiction under the regulatory authorities referenced above.
Routine Uses: This information may be shared with the Department of Justice and other federal, state, and local government agencies, and the public, and may be made available as part of a public notice as required by federal law. Your name and property location where federal jurisdiction is to be determined will be included in the approved jurisdictional determination (AJD), which will be made available to the public on the District's website and on the Headquarters USAGE website.
Disclosure: Submission of requested information is voluntary; however, if information is not provided, the request for an AJD cannot be evaluated nor can an AJD be issued.
