

Sex Designation on Birth Records

The OVERS system has five sex designation options for birth records:

- Female
- Male
- Undetermined - Used in cases where the sex cannot be determined due to a medical condition.
- Unknown - (Do not use.) While this category is an option in OVERS, it is rarely, if ever, used for birth records. A sex that is unknown is assigned as Undetermined.
- X (non-binary) - Used to indicate that a child's gender identity is not exclusively male or female.

Start/Edit New Case

Here you can see the options in the dropdown menu when starting or editing a case. This is a required field.

Child Page

The sex designation option that was first selected will populate in the Child page. The sex can be changed to a different selection if needed on this page.
