1 Introduction

This document provides an overview of the patterns and practices for making requests to the Gun Dealer API. It also provides details about the functionalities for each of the transaction types. Lastly, this document provides detailed reference sand examples for each of the data elements needed for the various actions. At all points, working examples have been provided to make it easier to start using the API within your existing applications.

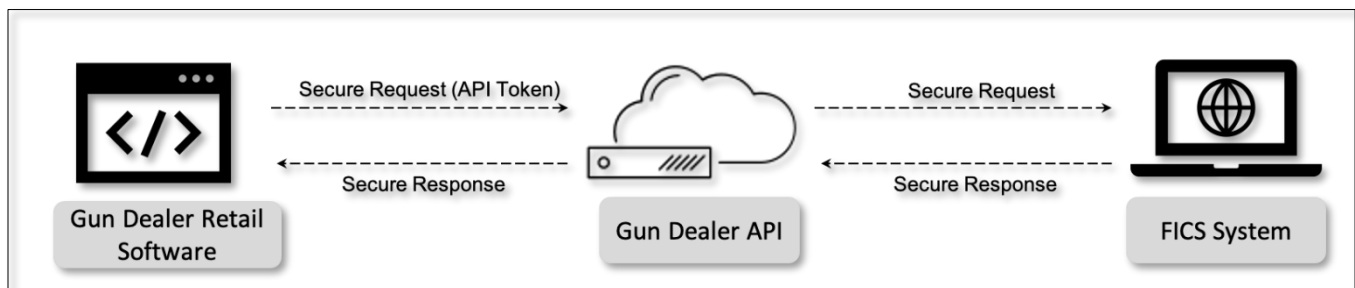

This document defines the requirements for use of the Oregon State Gun Dealer API. It will be used by the gun dealers and technical staff for following reasons:

- Creating a Gun Dealer account in the FICS Portal
- Generating the Gun Dealer API Token
- Following patterns and practices for using the Gun Dealer API
- Understanding technical specifications for each action performed with the Gun Dealer API
- Viewing detailed reference and examples of required data elements

2 Overview

There are two different ways a gun dealer can submit data. First, the dealer can login to Dealer Portal to manually key in data. Second, the gun dealer can use the Gun Dealer API. The Gun Dealer API is a RESTful web-based API that allows a third-party application to perform secure firearm and background checks as mandated by Oregon State Law.

With this API, gun dealers can enhance their existing application to electronically submit requests for firearm and background checks without needing to manually login into the EIC Gun Dealer Portal.

2.1 Functionalities of the Gun Dealer API

Using the Gun Dealer API will allow you to perform 5 different actions. These are a list of these actions and a brief description of the functionalities for each of these actions.

2.1.1 Transaction Types

These transaction types can be added via the Gun Dealer API. Each of these transaction types will return a unique transaction ID (UID). This ID can be used to add a thumbprint image and to check the status of any transaction.

- **Gun Check Only Transaction** - This functionality will allow the user to check on the status/history of a firearm. There can be a maximum of 500 firearms specified in a single transaction.
- **Dealer Firearm Transaction** - This functionality will allow the user to complete a firearm purchase made at a business location. The gun dealer will require the firearm information, buyer information, and identification information.

- **Private Party Through Dealer Firearm Transaction** - This functionality is used when a dealer is used to broker a private party firearm sale. The gun dealer will require the firearm information, buyer information, identification information, and basic seller information.
- **Add a thumbprint image** - This functionality will allow the user to associate a fingerprint image to a transaction.
- **Check the status** - This functionality will allow the user to check the status of a transaction.

2.2 Environments and Usage

There will be two separate Gun Dealer API environments available for authorized gun dealers: **Test** and **Production**. The Test environment will be available for authorized gun dealers to test the integration and functionalities of the Gun Dealer API. Gun dealers must successfully integrate with the test environment before access will be granted to the Production Gun Dealer API environment.

The Gun Dealer API environments will only be accessible to authorized Internal Protocol (IP) addresses as determined by OSP. To gain access to the Test or Production Gun Dealer API environments, gun dealers will need to complete the API Connectivity Form and submit it to the LEDS Helpdesk. Upon receipt, OSP will process the request and will contact the Gun Dealer when access has been granted to the appropriate Gun Dealer API environment.

LEDS Helpdesk
Email: LEDS.2020@osp.oregon.gov
Phone: 503-378-5565

Once the gun dealer has been granted access to the Gun Dealer API, all the API features and functions described within the document will be available within the authorized environment(s). Any questions or issues encountered while utilizing the Gun Dealer API should be directed to the LEDS Helpdesk.

3 Preliminary Requirements

3.1 Create a Dealer Account with Admin Permissions

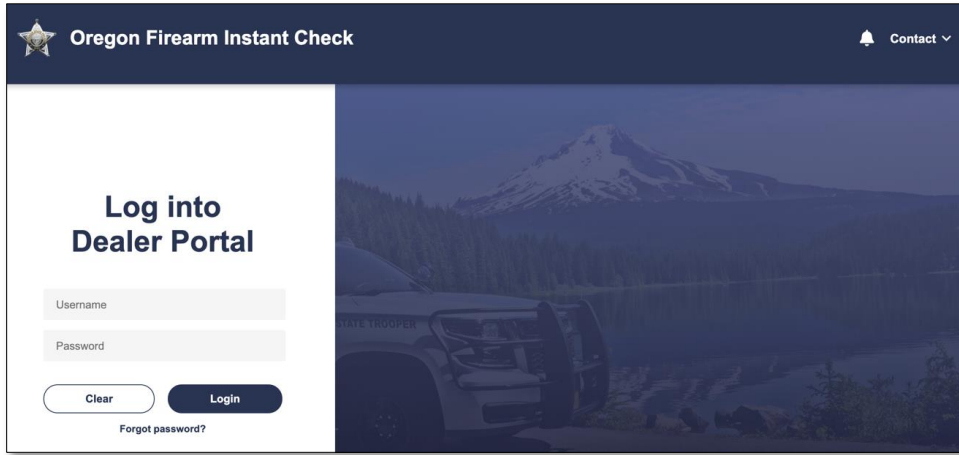

Once your account credentials have been established by the FICS Unit, you may proceed to log into the appropriate environment (test or production), based on your request.

3.2 Generate API Token for the Gun Dealer API

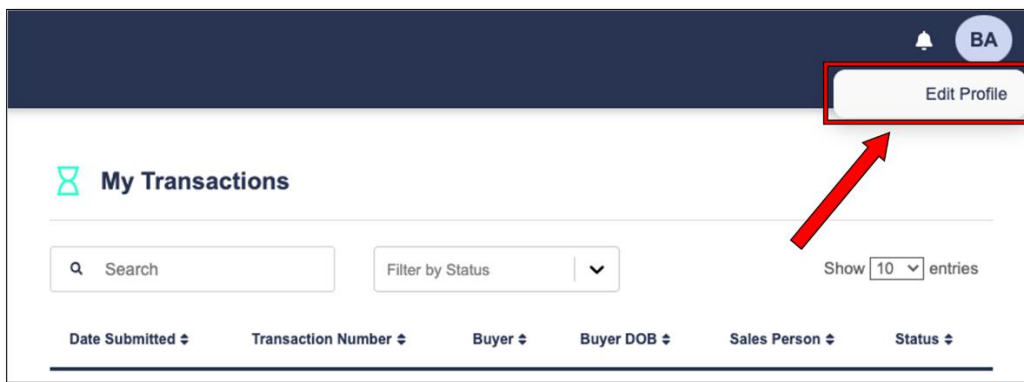

One active API Token is allowed per account and generating a new one automatically invalidates any preceding API Tokens associated to the account. (One should always store API Tokens securely)

3.2.1 *How to Generate an API Token*

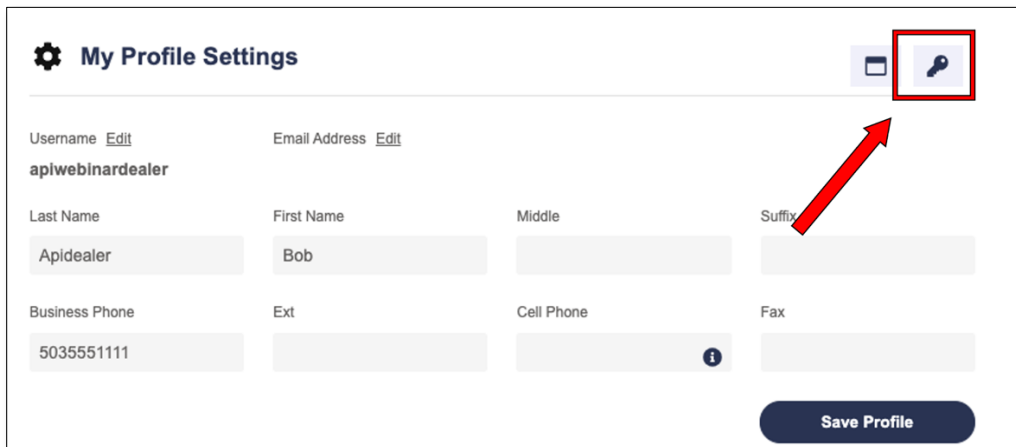

1. Login to the dealer portal with your admin user account

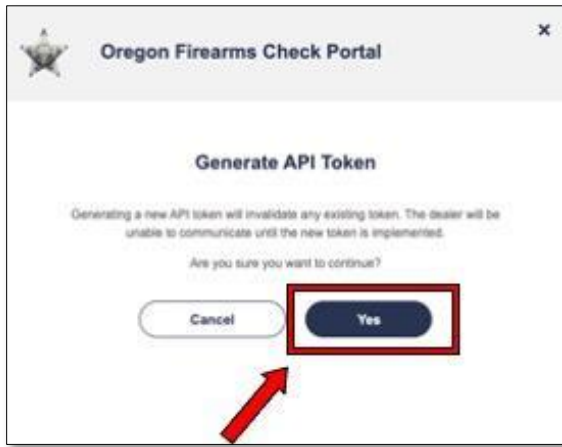

2. Click "Edit Profile" in the top right-hand corner of your window

3. Click "Generate API Token" in the top right-hand corner of your window

4. Click "Yes" to generate your API Token

- 5. Copy the API token and pass it to your IT department for validation.

4 Using the Gun Dealer API

4.1 API Token

The Gun Dealer API uses a bearer token security model. Every request made to the Gun Dealer API requires an API Token in the authorization header of the request. The Gun Dealer API portal will authenticate and authorize the request based on the token. If the token is malformed or expired the request will be logged and the client will receive a 401 Unauthorized response. No action will be performed on the request if an invalid token is submitted.

How to Pass an API Token for Validation

The Gun Dealer API uses the bearer authorization pattern for HTTP requests. To implement this pattern, calls to the API need to include the following HTTP header:

```
Authorization: Bearer {Dealer API Token}
```

Example:

```
Authorization: Bearer  
eyJhbGciOiJIUzUxMiJ9.eyJzdWIiOiJqc2V0dGxlIiwiaWF0IjoxNjE2NDMzNjk4LjQyOTdjbmFmNi04NmViLTQ0YmUtYTkyMy04MDI1ODJlZWMyYWMifQ.pGDch9R4ZNSFPe  
wEqhcPFPduKy40yBC6fLPZ4i-f0oIKoaQzodPcATJyNqjRh4n30-  
oipWoza3YGhhRfMgdxNA
```

Safeguarding your Token

Never give out your API Token! The API Token is the authorization and authentication into the API and should be treated as a password and secured.

- Recommended best Practices:
 - Set the API Token as an environment variable that is either stored directly on a server and referenced, or managed by a build and release process. Using this approach, you can keep from hardcoding the API Token directly into your application.
 - The API Token should not be added into any publicly searchable source code repositories.
 - Scenario: The API token is added to the source code in a configuration file and the file is part of a public GitHub repository.
 - Requests to the API should be made server side.
 - Scenario: When a transaction is initiated from an application, a request is made to the server via a MVC or API call. While processing this call, an HTTP request should be sent from the server to the Gun Dealer API to initiate a Dealer Only Transaction. If this is done on the client, then the client has to be given access to the API Token which could make the token less secure.
 - Do not store the API Token anywhere that is addressable on the Internet (configuration files, HTML, JavaScript, log files, error messages).

4.2 Transaction Id

A successful return from adding a transaction will return a transaction id. This id is a unique identifier tied to the transaction and will need to be persisted in your system so that you can use it as the input for either the request status or the add fingerprint Image to transaction API endpoints. The format of the Transaction Id is a UUID, a 36-character string that is guaranteed to be unique.

5 Usage of Code Sets

To perform a Firearm or Background check, the Gun Dealer API integrates with other state and federal systems. These systems require that certain data elements be consistent and adhere to a preestablished list of values known as code tables (see 6.1 below for list). A row in a code table includes a string version of the code and a human readable description. When providing data to the Gun Dealer API, the code string will need to be specified in the JSON syntax.

5.1 Code Sets used by the Gun Dealer API

Below are the list of codes sets to be used for specifying standardized data into the API. The values for the code sets can be found in Appendix A.

- [Firearm Category](#)
- [Country of Citizenship](#)
- [Ethnicity](#)
- [Exception For Out of State Resident](#)
- [Gun Make](#)
- [Gun Type](#)
- [Gun Action](#)
- [Gun Type Action](#)
- [ID Type](#)
- [Place of Birth](#)
- [Race](#)
- [Sex](#)
- [US State](#)

Example of using Property Value for Firearm Category code value

Example: correct usage of value

```
{
  "firearmType" : "LONG_GUN"
}
```

Example: incorrect usage of value (letter case + underscore)

```
{
  "firearmType" : "Long Gun"
}
```

6 HTTP Form Submission Guidelines

Content Type in HTTP Request

For all API end points except for SubmitPhoto, use a Content-Type of "application/json". This will allow data objects to be transmitted using the JSON format.

6.1 JSON Structure Rules

Data objects sent as JSON must be syntactically valid and at a minimum follow these rules:

1. All single objects must be contained in braces {}

Example: **correct** usage of braces

```
{
  "objectProperty" : "abc"
}
```

Example: **invalid** JSON due to no braces

```
"objectProperty" : "abc"
```

2. All list objects must be contained in brackets []

```
{
  "objectList" : [
    {
      "objectProperty": "abc"
    },
    {
      "objectProprty": "def"
    }
  ]
}
```

3. All field names need to be surrounded in quotation marks
The quotation marks must be double-quotes to be valid.

Example: correct usage of double quotes for a field name

```
{
  "objectProperty" : "abc"
}
```

Example: **incorrect** field name because it is not surrounded in quotation marks

```
{
  objectProperty : "abc"
}
```

Example: incorrect field name because it is surrounded in single-quotes and not double-quotes

```
{
  'objectProperty' : "abc"
}
```

6.2 JSON Data Object Rules

1. Field names are case sensitive and should be written in camelCase

If there is any confusion for the name of a field, please see the data type reference section that will have the correct casing and name for each element.

Example: Correct use of camelCase in field names

```
{
  "sellerInformation" : {
    "lastName" : "Jones",
    "firstName": "Bob"
  }
}
```

Example: Invalid field name specification in the JSON

```
{
  "SellerInformation" : {
    "LAsTName" : "Jones",
    "firstname": "Bob"
  }
}
```

2. Any non-required field can be included in the JSON and have a value of null

Example: Declaring a null value in JSON

```
"sellerInformation" : {
  "lastName" : "Jones",
  "firstName": "Bob",
  "middleName": null
}
```

3. Any non-required field may be omitted from the JSON

Example: Omitting a non-required field from the JSON. In this case middleName is not required.

```
"sellerInformation" : {
  "lastName" : "Jones",
  "firstName": "Bob"
}
```

4. Any field that has the potential to include non-numeric data must be surround in quotation marks.

Example: Quotation marks for non-numeric field.

```
{
  "gunChecks" : [
    {
      ...
      "caliber" : "12"
    },
  ],
}
```

```
{
  ...
  "caliber" : ".300"
}
]
```

5. Date and Time values should be specified in the following format: “yyyy-MM-ddThh:mm:ss”

- yyyy = 4 digit year
- MM = 2 digit month
- dd = 2 digit day
- hh = 2 digit hour
- mm = 2 digit minutes
- ss = 2 digit seconds

Example: Specifying a date/time JSON value

```
"sampleObject" : {
  "submittedDateTime" : "2021-03-01T14:15:23"
}
```

6. Unsupported fields will result in an error

Example: “salesPerson” field is spelled incorrectly

```
{
  "salPerson" : "Robert Smith",
  "alternatePhoneNumber": "1 (222) 333-2222",
  "alternatePhoneNumberExtension": "1234",
  ...
}
```

7. Two fields within the same object cannot have the same name.

Example: Two salesperson fields

```
{
  "salesPerson" : "Robert Smith",
  "salesPerson" : "Robert Smith",
  "alternatePhoneNumber": "1 (222) 333-2222",
  "alternatePhoneNumberExtension": "1234",
  ...
}
```

7.4 Adding a Thumbprint Image to a Transaction

POST /GunDealerAPI/SubmitThumbprint

The Submit Thumbprint endpoint allows multiple thumbprint images to be associated to a transaction created by the dealer. The input requirements for this endpoint are unique due to uploading a file. Where other end points use JSON to transfer data, this one has two input elements: Thumbprints and TransactionId. The request to the API needs to be POST action with a Multipart/form-data request type. At an HTTP level the request should look like:

```
POST http://{API-SERVER-URL}/api/submitThumbprint
Authorization: Bearer {Dealer API Token}
Content-Type: multipart/form-data; boundary=boundary

--boundary
Content-Disposition: form-data; name="transactionId"

{TransactionId}
--boundary
Content-Disposition: form-data; name="thumbprints";
  filename="{FileName_1.jpg}"

< ./{File_1.jpg}
{TransactionId}
--boundary
Content-Disposition: form-data; name="thumbprints";
  filename="{FileName_2.jpg}"

< ./{File_2.jpg}
```

Where content in { } is supplied by the request. A multipart/form-data request is a standard type of HTTP request. Please refer to the documentation provided by the framework you are using for making HTTP calls to find the appropriate syntax.

9.4 Identification Information

The purpose of this structure is so that identification information for a buyer can be recorded and used in a background check. For a background check only one identification type is required, but multiple forms of identification can be submitted. In some cases, a particular type of identification may require one or two additional forms of identifications to be provided. There are also specific validation rules for the first form of identification. In order to make these rules clear, there are two validation tables present one for the first form of identification and a second for all other forms of validation.
