#### **PREVENTIVE CARE**

### **HIV POST-EXPOSURE PROPHYLAXIS (PEP)**

#### STATEWIDE DRUG THERAPY MANAGEMENT PROTOCOL for the OREGON PHARMACIST

#### **AUTHORITY and PURPOSE:**

- Per <u>ORS 689.645</u>, a pharmacist may provide patient care services pursuant to a statewide drug therapy management protocol.
- Following all elements outlined in <u>OAR 855-020-0110</u>, a pharmacist licensed and located in Oregon may prescribe post-exposure prophylaxis (PEP) drug regimen.
- The prescribing Pharmacist is responsible for all laboratory tests ordered, resulted and reporting as required.

#### STANDARDIZED PATIENT ASSESSMENT PROCESS ELEMENTS:

- Utilize the standardized PEP Patient Intake Form (pg. 2)
- Utilize the standardized PEP Assessment and Treatment Care Pathway (pg. 3-5)
- Utilize the standardized PEP Prescription Template optional (pg. 6)
- Utilize the standardized PEP Patient Informational Handout (pg. 7)
- Utilize the standardized PEP Provider Fax (pg. 8)

#### PHARMACIST TRAINING/EDUCATION:

Completion of a comprehensive training program related to the prescribing and dispensing of HIV
prevention medications, to include related trauma-informed care

Patient must be warm referred to appropriate provider following prescription of PEP for required baseline and follow-up testing. Pharmacist						
must notify both the provider and patient.						

## Post-exposure Prophylaxis (PEP) of Human Immunodeficiency Virus (HIV) Assessment and Treatment Care Pathway

(CONFIDENTIAL-Protected Health Information)

Hepatitis B Review Patient Intake Form #15, 16 - Truvada® (FTC/TDF) treats HBV, therefore once stopped and/or completed, the patient could experience an acute Hepatitis B flare -Review the risks of hepatitis B exacerbation with PEP with the patient			Renal Function Review Patient Intake Form #17 -Truvada® (FTC/TDF) requires renal dose adjustment when the CrCl <50ml/min		Pregnant or Breastfeeding Review Patient Intake Form #18,19 - Pregnancy is not a contraindication to receiving PEP treatment	
History of known Hepatitis B infection (latent or active)?  Confirmation of being fully vaccinated for hepatitis B via ALERT-IIS  -Chronic Kidney Disease -Reduced Renal Function			□NO	□YES		
NO YES Refer to ER	<ul><li>□ NO</li><li>Offer vaccine if appropriate</li></ul>	□ YES	□NO	□ YES  Refer to  ER		
Truvada® (emtricitabine 200 mg/tenofovir disoproxil fumarate 300 mg) one tablet by mouth daily for 30 days PLUS Isentress® (raltegravir400 mg) one tablet by mouth twice daily for 30 days  -or-						
<ul> <li>Truvada® (emtricitabine 200 mg/tenofovir disoproxil fumarate 300 mg) one table.</li> <li>Tivicay® (dolutegravir 50mg) once daily for 30 days.</li> </ul>				ig) one tablet by mot	util dally for	30 days PLU3

<sup>i</sup>According to the CDC PEP treatment guidelines, Truvada® (FTC/TDF) plus Isentress®(raltegravir) or Tivicay® (dolutegravir) is a preferred regimen for individuals 13 years and older.

https://www.oregon.gov/oha/ph/providerpartnerresources/localhealthdepartmentresources/pages/lhd.aspx

Oregon AIDS Education and Training Center List of PEP Resources, PEP Navigation Services, STI and HIV testing and treatment sites and community organizations: <a href="https://www.oraetc.org/pepresource-list">https://www.oraetc.org/pepresource-list</a>

Consider calling the HIV Warmline (888) 448- 4911 for guidance.

#### **RECOMMENDED REGIMEN:**

Truvada® (emtricitabine 200 mg/tenofovir disoproxil fumurate 300 mg) one tablet by mouth daily for 30 days

#### **PLUS**

Tivicay® (dolutegravir 50mg) one tablet by mouth once daily for 30 days

#### -or-

Isentress® (raltegravir 400 mg) one tablet by mouth twice daily for 30 days

#### Notes:

- There may be other FDA-approved regimens available for treatment of PEP.
- Although labeling is for 28-day supply, 30 days is recommended for prescribing due
  to the products being available only in 30-day packaging and high cost of the
  medications which could provide a barrier to availability and care. If able, 28-day
  regimens are appropriate if the pharmacist/pharmacy is willing to dispense as such.
- Pregnancy is not a contraindication to receive PEP treatment as Truvada® and
   Tivicay® or Isentress® are preferred medications during pregnancy. If the patient is
   pregnant, please report their demographics to the Antiretroviral Pregnancy
   Registry: <a href="http://www.apregistry.com">http://www.apregistry.com</a>
- If the patient is breastfeeding, the benefit of prescribing PEP outweighs the risk of the infant acquiring HIV. Package inserts recommend against breastfeeding. "Pumping and dumping" may be considered. Consider consulting with an infectious disease provider, obstetrician, or pediatrician for further guidance.

<sup>&</sup>quot;Truvada® (FTC/TDF) dosing is approved to prevent HIV infection in adults and adolescents weighing at least 35 kg (77 lb)

iii Refer patient to local primary care provider, infectious disease specialist, or public health department.

<sup>&</sup>lt;sup>iv</sup> Lab Reporting: The <u>disease reporting poster</u> for clinicians summarizes rules and lists the diagnoses for which lab-confirmed and clinically suspect cases <u>must be reported within one working day</u> to the Local Public Health Authority (LPHA). People reporting cases are encouraged to use the <u>online morbidity report system</u>, but a <u>fillable PDF</u> is also available to fax to <u>LPHA</u>

<sup>&</sup>lt;sup>v</sup> County Health Department Directory

## Post-exposure Prophylaxis (PEP) of Human Immunodeficiency Virus (HIV) Assessment and Treatment Care Pathway

(CONFIDENTIAL-Protected Health Information)

#### **COUNSELING POINTS:**

- Truvada® (emtricitabine/tenofovir disoproxil fumurate):
  - Take the tablet every day as prescribed with or without food. Taking it with food may decrease stomach upset.
  - o Common side effects include nausea/vomiting, diarrhea for the first 1-2 weeks.
  - NSAIDs should be avoided while patients are taking HIV PEP to avoid drug-drug interactions with Truvada.
- Tivicay® (dolutegravir):
  - Take the tablet once daily as prescribed with or without food. Taking it with food might decrease any stomach upset.
  - o Concomitant use with aluminum-magnesium antacids is contraindicated.
  - o Tivicay® (dolutegravir) must be administered 2 hours before or 6 hours after other polyvalent cations, but can be administered at the same time as calcium or iron if taken with food.
  - Metformin coadministration can increase metformin concentrations. Monitor blood glucose and for metformin side effects
- Isentress® (raltegravir)
  - Take the tablet twice daily as prescribed with or without food. Taking it with food might decrease any stomach upset.
  - o Isentress® (raltegravir) must be administered 2 hours before or 6 hours after other polyvalent cations.
  - Concomitant use is contraindicated with aluminum-hydroxide antacids
  - Calcium carbonate: no dose adjustment or separation is necessary
- Both medications (Truvada® <u>plus</u> <u>Tivicay® or Isentress®</u>) must be taken together to be effective and to prevent possible resistance.
- You must follow up with appropriate provider for lab work.
- Discuss side-effects of "start-up syndrome" such as nausea, diarrhea, and/or headache which generally resolve within a few days to weeks of starting the medications.
- Discuss signs and symptoms of seroconversion such as flu-like symptoms (e.g. fatigue, fever, sore throat, body aches, rash, swollen lymph nodes).

\*Oregon licensed pharmacists are mandatory reporters of child abuse (<u>ORS Chapter 419B</u>). Pharmacists should also report elder abuse and vulnerable adult abuse. Reports must be made to the Oregon Department of Human Services @ 1-855-503-SAFE (7233).

#### PHARMACIST MANDATORY FOLLOW-UP:

- The pharmacist will contact the patient's primary care provider or other appropriate provider to provide written notification of PEP prescription and to facilitate establishing care for baseline testing such as HIV RNA or 4<sup>th</sup> generation HIV Antigen/Antibody, Hepatitis B serology, Hepatitis C antibody, SCr, AST/ALT, Syphilis, Chlamydia and Gonorrhea testing and pregnancy.
- The pharmacist will provide a written individualized care plan to each patient.
- The pharmacist will contact the patient approximately 1 month after initial prescription to advocate for appropriate provider follow-up after completion of regimen.

#### Patient Information

Post-Exposure Prophylaxis (PEP) for Human Immunodeficiency Virus (HIV)

Pharmacy Name:	_Pharmacist Name:
Pharmacy Address:	
Pharmacy Phone Number:	_

### This page contains important information for you; please read it carefully.

You have been prescribed Post-Exposure Prophylaxis (PEP) to help prevent Human Immunodeficiency Virus (HIV). Listed below are the medications and directions you have been prescribed, some key points to remember about these medications, and a list of next steps that will need to be done in order to confirm the PEP worked for you.

### Medications: You must start these within 72 hours of your exposure

- Truvada® (emtricitabine/tenofovir disoproxil) 200 mg/300 mg take 1 tablet by mouth daily for 30 days, AND
- Tivicay® (dolutegravir) 50mg take 1 tablet by mouth once daily for 30 days, OR
- Isentress® (raltegravir) 400 mg take 1 tablet by mouth twice daily for 30 days

#### **Key Points**

- Take every dose. If you miss a dose, take it as soon as you remember.
  - o If it is close to the time of your next dose, just take that dose. Do not double up on doses to make up for the missed dose.
- Do not stop taking either medication without first asking your healthcare provider or pharmacist.
- Truvada®, Tivicay® and Isentress® are well tolerated by most people. The most common side effects (if they do happen) are stomach upset. Taking Truvada®, Tivicay®, and Isentress® with food can help with stomach upset. Over-the-counter nausea and diarrhea medications are okay to use with PEP if needed.
- Acetaminophen is the preferred over-the-counter pain medication. Avoid medications such as ibuprofen or naproxen while taking PEP.

#### Follow-up and Next Steps

- 1. Contact your primary care provider to let them know you have been prescribed PEP because they will need to order lab tests and see you.
- 2. Our pharmacist will contact your healthcare provider (or public health office if you do not have a primary healthcare provider) to let them know what labs they need to order for you.
- 3. The tests we will be recommending to check at 4-6 weeks and at 3 months are listed below. The listed labs will involve a blood draw. Your provider may choose to do more tests as needed.

Iabs W	in involve a plood draw. Tour provider may choose to do more tests as needed.
	HIV RNA or HIV antigen/antibody
	Kidney function - Serum creatinine (SCr)
	Liver function- Alanine transaminase (ALT) and aspartate aminotransferase (AST)
	Sexually transmitted diseases- Syphilis, Chlamydia and Gonorrhea
	Pregnancy

4. If you think that you might still be at risk of HIV infection after you finish the 30-day PEP treatment, talk to your doctor about starting Pre-Exposure Prophylaxis (PrEP) after finishing PEP.

## Provider Notification Post-Exposure Prophylaxis (PEP) for Human Immunodeficiency Virus (HIV)

Pharmacy Name:	Pha	rmacist	Name:	
Pharmacy Address:				
Pharmacy Phone:	Pharmacy	/ Fax:		
Dear Provider			(name), () (FAX)	
our patient	(name)	/	/ (DOB) has been prescribed HIV Post-	
Exposure Prophylaxis (PEP) at			Pharmacy.	
This regimen consists of:				
<ul> <li>Truvada<sup>®</sup> (emtricitabine/tenofovi</li> </ul>	r disoproxil) 20	0/300n	ng tablets - one tab by mouth daily for 30 days AN	D
<ul> <li>Tivicay® (dolutegravir) 50mg - tak</li> </ul>	e 1 tablet by m	outh or	nce daily for 30 days, <u>OR</u>	
<ul> <li>Isentress<sup>®</sup> (raltegravir) 400mg tak</li> </ul>	olets - one tab b	y mout	th twice daily for 30 days.	

We recommend an in-clinic office visit with you or another provider on your team within 1-2 weeks of starting HIV PEP. Listed below are some key points to know about PEP and which labs are recommended to monitor.

#### **Provider pearls for HIV PEP:**

This regimen was initiated on \_\_\_\_\_

- Truvada® needs renal dose adjustments for CrCl less than 50 mL/min. Please contact the pharmacy if this applies to your patient.
- Truvada<sup>®</sup>, Tivicay<sup>®</sup>, and Isentress<sup>®</sup> are safe in pregnancy. If your patient is pregnant or becomes pregnant, they may continue PEP for the full 30 days.
- NSAIDs should be avoided while patients are taking HIV PEP to avoid drug-drug interactions with Truvada.
- Truvada<sup>®</sup> is a first line option for Hepatitis B treatment. This is not a contraindication to PEP use, but we recommended you refer Hepatitis B positive patients to an infectious disease or gastroenterology specialist.
- If your patient continues to have risk factors for HIV exposure, consider starting Pre-Exposure Prophylaxis (PrEP) after the completion of the 30-day PEP treatment course.

### We recommend ordering the following labs after the initiation of HIV PEP:

Test	Baseline	4-6 weeks after exposure	3 months after exposure
HIV RNA or HIV antigen/antibody	х	х	х
Hepatitis B serology	х	-	-
Hepatitis C antibody	х	-	-
Serum creatinine	х	х	-
Alanine transaminase, aspartate aminotransferase	х	х	-
For Sexual Exposure Only			
Syphilis, gonorrhea, chlamydia testing	х	х	-
Pregnancy	х	х	-

Exposed person should be tested again at 6 months for hepatitis B serology and hepatitis C antibody, if they are susceptible to hepatitis B and hepatitis C, respectively. Any positive or indeterminate HIV antibody test should undergo confirmatory testing of HIV infection status at 6 months.

If you have further questions, please contact the prescribing pharmacy or call the HIV Warmline. The HIV Warmline offers consultations for providers from HIV specialists and is available every day at: (888) 448-4911. For more information about PEP, please visit the CDC website at <a href="mailto:cdc.gov/hiv/basics/pep.html">cdc.gov/hiv/basics/pep.html</a>.
